CATALOGUE

OF

**BULBOUS AND TUBEROUS ROOTED
FLOWERS,**

OF THE MOST CHOICE AND SPLENDID VARIETIES,

CULTIVATED AT THE

LINNEAN BOTANIC GARDEN AND NURSERIES, FLUSHING,
NEAR NEW-YORK.

William Prince & Son, Proprietors.

IN addition to the immense stock under cultivation in the establishment, comprising more than 50,000 roots, the proprietors make very large annual importations of the choicest new varieties from Holland, Belgium, and other parts of Europe. The following have been selected with great care from the finest foreign collections, and are remarkable for their size, beauty, and peculiarity, and for the delicacy of their tints. In the selection no expense has been spared, and great exertions and large disbursements have been made in order to obtain the most beautiful varieties of every class. It can therefore with the utmost confidence be asserted that this collection is unrivalled in extent and variety. The whole are cultivated under the same names by which they were imported, and the prices are greatly reduced and are lower than have ever before been offered to the public, the great increase of the stock enabling us to tender this advantage to purchasers. Those who purchase to re-vend, will be dealt with on the most reasonable terms.

At the conclusion of the present Catalogue the necessary directions are given for their culture, &c.

Where the prices are by assortment, or by the dozen, the selection of the varieties is to be made by the proprietors; but if applicants will name such as they already possess, those varieties will be omitted in the selection.

* denotes the earliest varieties, most proper for blooming in glasses or pots.

t denotes those that are tender.

DOUBLE HYACINTHS.

Dark Blue and Purple.

SINGLE HYACINTHS.

In regard to Single Hyacinths an incorrect prejudice exists, arising from the fact that their peculiar merits are but little known. For *early flowering* and particularly for *glasses or pots*, they are extremely desirable; they combine the most brilliant colors, and surpass the double varieties in the profusion of their bells. It may in fact be said that they precede the double varieties in the time of flowering, and thus in a general collection extend the period during which we may enjoy the beauties and fragrance of this delightful class of flowers.

PÆONIES, *Pivoines*.

No class of flowers has recently attracted more attention in Europe than this, a monograph of which has lately been published in London.— Every variety will support the winters of the United States and Canada. Most of the varieties are extremely splendid, and others possess striking peculiarities. Anticipating that a similar taste would be evinced in this country, the proprietors have by great exertion, obtained every variety possible.

1 Sabine's crimson official	<i>Pæonia officinalis, sabini</i>	1

N. B. For various other Bulbous and Tuberous rooted plants, see the other Catalogues. Pæonies, being tuberous rooted, can be packed in moss and expedited in the same manner as Bulbous roots.

DOUBLE DAHLIA, OR GEORGINA.

This magnificent plant bids fair to rival in splendor and in diversity the far famed Tulip and the Rose. Many of the varieties are inconceivably beautiful and interesting, and there seems a never ending variation of color and form.

The numerous varieties combine the richest shades and most varied hues of which nature is susceptible, with every diversity in shape and magnitude, from the size of a small globe an inch and a half in diameter, to an expanded disk twenty-four inches in circumference! Most

persons are not aware how simple are the means necessary to their preservation during winter. When the frost has destroyed the foliage, nothing more is required than to cut off the stalks two or three inches from the ground, and to take up the roots and put them in boxes of dry sand in a cellar or any other place free from frost, there to remain till spring without further care. Indeed the proprietors have for the two past winters kept their stock quite dry and without sand.

The collection here offered is unrivalled in extent and beauty, and combines the most magnificent varieties of each class; it being a concentration of the most choice and interesting that could be selected from the principal establishments of Europe. The inferior kinds, to the extent of 200 varieties, although in our possession, we have omitted, and it will be perceived that the catalogue is particularly rich in the splendid Variegated, Striped, Mottled, and Shaded varieties and others of the first class and most vivid and brilliant colors.

In addition to the usual course of obtaining the newest kinds offered for sale in the catalogues of foreign Florists, the proprietors have made arrangements with several amateurs abroad to furnish them with their most interesting varieties previous to their "coming out" in Europe; and it is to this arrangement that they are indebted for a large number of the very splendid varieties comprised in their catalogues of the last and the present year, although obtainable no where else in our country. The present collection may with justice therefore be said to constitute the *acme* to which this favorite flower has yet attained. Other new varieties are continually accumulating, and Supplementary Catalogues containing the additional kinds will be published in March and October of each year.

A specimen bed comprising a thousand plants, is annually planted for the inspection of amateurs, which will be extended by additions of all the most choice new varieties that foreign countries and our own may present, thereby affording ample facilities for personal examination and selection, to those who desire it.

A large stock will be constantly under culture in pots, so as to be ready for transportation at any period desired, and more than 10,000 are now ready for delivery.

It may be asserted without fear of contradiction, that at no period since the era of the famed Tulipo-mania, has the attention of the votaries of Flora been so universally devoted to any flower as it now is to the Dahlia, the "Glory of the Autumn." To the varieties first cultivated the objection was justly made that the expansion of their flowers commenced too late in the season to merit much estimation, but culture and judicious propagation have removed this difficulty as regards the new varieties. These commence blooming the middle of June, and continue until arrested by frost, our fine American autumn being particularly favorable to their development. The new varieties produce also a much greater profusion of flowers than the older sorts.

Bivalling as they do all other plants of the garden in their majestic appearance and gorgeous display, they also combine the merit of facility of culture to such a degree, that the most ignorant can scarcely fail of success. And indeed the day is not distant when the number of varieties will surpass that of either the Hyacinth, the Tulip, the Rose, or the Carnation, and the numerous Striped, Variegated, and Mottled Dahlias, will then be designated under the various classes of Flakes, Bizarres, &c., in the same manner as the Carnation; the connoisseurs without doubt becoming quite as fastidious in regard to the formation of the petals as they now are in respect to the last named flower.

will require of course to be of greater thickness and strength than such as are designed for the more dwarf varieties. The work of driving the poles may be more easily effected immediately after a rain, when the ground is moist.

As the plants advance in growth, it will become necessary to tie the stalks firmly to the poles to guard against the effects of winds and storms. For this purpose common bass matting, or any other soft ligature is to be preferred. The branches being extremely brittle, are subject to be broken in severe gales when not well supported. Some persons train their Dahlias on a trellis, which affords security to every branch, and presents at the same time a fine effect. It is only in very exposed situations that the extreme caution is required of tying every branch; and in cities and other well sheltered locations, far less care will suffice in this respect. It is deemed beneficial to trim off the lateral shoots nearest the ground, to a certain height in proportion to the growth of the plant; say for dwarfs twelve inches, and for other varieties eighteen, increasing to twenty four inches for the tallest. Some cultivators thin out about half the number of upper branches, in order to add to the strength of the remaining ones, and to increase the size and beauty of the flowers.

TO VENDERS of *Esulent Vegetable, Field and Flower Seeds, Bulbous Flower Roots, Dahlias, Pæonies, Fruit and Ornamental Trees, &c.*

WM. PRINCE & SONS, having the most extensive Horticultural Establishment in America, announce to all venders of Seeds, and to those who may desire to undertake such business, that they will supply every variety desirable, at very low rates and at a liberal credit, it being their intention to render this branch of business profitable by its great extent and not by enhanced prices.

A large extent of ground is devoted to raising their Seeds, and their arrangements in foreign countries are such as to ensure accuracy. These seeds, possessing therefore the advantage of being raised under our own observation, or when imported from confidential correspondents, of being tested to our satisfaction, their *accuracy and vitality are expressly guaranteed*. The imported seeds are mostly obtained from the south of Europe, where they become so well matured, that they preserve their vitality far better than English seeds, the latter being raised in a humid climate. The Catalogue will be found to contain many new and very choice varieties *never before offered to the public*, and incomparably superior to many of the old varieties; and it is intended to enrich this branch of the business with the same zeal which has been extended to the other departments. Among the new acquisitions are a number of very superior Cabbages, Lettuces, Peas, Beans, Onions, Radishes, Beets, Cucumbers, Squashes, Pumpkins, Spinach, Turneps, &c. introduced from the south of France, Spain, and Italy, and particularly suited to our climate. The following choice new Melons can now be supplied—Malta winter, with green flesh, rich and high flavored, and keeps till February; Nettle Romana, Oval Romana, French Muscade, Cohansa, Imperial, Ispahan, Cyprian, Early Cantaloup, Green fleshed Sugar, Fine Japan Cantaloup, Dark Orange Cantaloup, Embroidered Cantaloup, Scarlet Rock, Small Prescott, White Rock, Green Pine Apple, Nettle Cantaloup, and several others, comprising a luxurious addition to the dessert. Among the choice new Beans, that great desideratum has been obtained; a substitute for the Lima, suited to more northern climates. The *prolific Lima* exceeds the common Lima in richness, is at least two weeks earlier, and its produce is fourfold. The new Bonavista bears a similar rank for excellence among the dwarf varieties. Space will not here allow us to state in detail the superior qualities of the other new va-

rieties, but those who request a selection of the choicest, will be sure to receive such.

A Supplementary Catalogue is annexed, enumerating about 600 varieties of Annual, Biennial, and Perennial Flower Seeds, very many of which are of extreme rarity; and they being mostly collected from plants in this establishment, their excellence may be relied on. The principal object in view is to furnish venders of seeds with wholesale quantities at reasonable rates, but to accommodate our correspondents we cannot object to furnishing smaller parcels for family gardens when applied for. Specimen beds are sown of every variety, for the inspection of visitors, and accurate descriptions, are made for the purpose of perfecting a cheap work which it is proposed to publish, containing descriptions of the different varieties of Esculent Vegetables, &c., with directions for their culture, &c.

Every person desirous to engage in the sale of the above named articles, will on application, *receive all the information requisite to the object*, and such an establishment ought to exist in every town in the Union. The present period is particularly eligible for forming arrangements for business, preparatory to the regular sales. Bulbous roots, Dahlias, Pæonies, &c. being usually vended in a dry state, can with perfect convenience be made objects of sale in Seed stores, and they will be supplied at so liberal a discount as to make their sale an object of importance. The period for sales is from the 1st of October to 1st May, but Dahlias will succeed if not planted till the middle of May or 1st of June. Double Dahlias, of named varieties, selected by the Proprietors, will be supplied at \$3, \$4.50, and \$6 per dozen, according to quality and rarity, and these can be retailed at a large profit. Each Dahlia will be put up separately in moss, ready for sale, when sent to venders. The following species of Bulbs can be vended in the Spring as well as Autumn as they need not be planted till May; Amaryllis Formosissima, or Jacobean Lily, and most others of its class, Tuberoses, Feraria, or Tyger Flowers of all kinds, Crinums, Pancratiums, Zephyranthes of all kinds, and some others. The reduced prices for Bulbous Flower roots by the dozen, and in assortments, as stated in the present Catalogue, will allow a retail profit thereon of from 25 to 100 per cent.

Great attention has been paid to obtaining from foreign countries the finest Agricultural seeds, among which are the following—Pacey's and Scotch Perennial Rye Grass; Italian Rye Grass; Venetian Wheat which has produced here 34 bushels to the acre, and other varieties; Skinless Oats; English Potatoe Oats, Weighing 44 lbs. per bushel; Early Angus, and Hopetoun Oats, superior to any others in Europe; English, French and Dutch White Clover seed; Provence Luzerne, the finest known; Trifolium, incarnatum, or Crimson Clover, very early; Double crop Sainfoin; Large Lentiles; Vetches of the best varieties; Trefoil, or Yellow Clover; Taylor's Fortyfold, and Early Nonpareil Potatoes; now taking precedence of all others, the former being the most productive variety known; Potatoe and White Top Onions; White Italian Mulberry; Large Riga Flax; Superior Barley of two varieties; Extra large Fuller's Teazel; Mangold Wurzel Beet, of the best variety; Large Yellow, and Large White Sugar Beet, the latter sweetest of all Beets, and the three all very profitable for cattle; Superior Purple Top Swedish Turnep, or Ruta Baga; Large White and Large Yellow field Carrots; the best kinds of Field Turneps, and Cabbages, for cattle, &c. The seeds of these can be furnished in large quantities, much below the usual rates, a difference in price of course being made when very large parcels are desired; and where the purchase is made for *cash*, a discount will be allowed. Those who desire it can forward lists stating quantities wanted, &c., which will be priced by us and returned by the first mail.

Some explanation may be requisite in regard to the course adopted in making sales to venders. The seeds are usually supplied by the pound or bushel; but of the higher priced Vegetable seeds, and of such as are in but little request, parcels of half and quarter pound, and of a half, quarter, and eighth bushel will be supplied on similar terms. Applications are sometimes made for wholesale quantities to be put up in retail parcels, regularly labelled, &c., and they will be supplied in that manner when required. Purchasers will readily perceive, however, that they derive much greater advantages on the score of profit, by purchasing in the manner first designated. Flower Seeds of above 600 beautiful varieties will be supplied to venders in parcels at 25 to 50 cents each, and many varieties can be furnished by the ounce, pound, &c., when so required. They will also be supplied, put up in small parcels ready for retailing. A liberal credit will be allowed, and where a good understanding is established, there will be no difficulty in arranging this point to mutual convenience, and on this, and every other subject the suggestions of correspondents will receive the fullest consideration. The different Treatises hereafter enumerated will be supplied to venders at 20 per cent. discount. A Seed Catalogue containing the New York retail prices as a guide to venders will be sent to every applicant. Seeds of the new crop can be supplied in August and September, and Turnep seeds and some other kinds can be furnished the last of June. When so desired assorted boxes of Seeds can be supplied selected to suit any part of North or South America, the West Indies, or elsewhere, and of any value from \$5 to \$100. Implements of Husbandry and Garden Tools of every description, Agricultural and Horticultural Books, and the superior Compressed Dry Herbs, prepared by the Shakers, can be supplied to any extent at their prices.

The Proprietors have further to state, that their Fruit and Ornamental Trees, &c. are of *large size and vigorous growth*, and superior to any before offered to the public. The Establishment contains at the present period *more than a million of Trees and Plants*, and the Proprietors are willing to enter into arrangements of the most liberal description both as to prices and credit with all such persons as desire large quantities of Trees, &c., and with those proprietors of Nurseries who wish to extend their collections, and such other persons as wish to establish *New Nurseries*, they will enter into arrangements *on terms which will allow ample time for advantageous reimbursement*. Any persons who are desirous to act as agents for receiving orders for Trees, in towns where no agency at present exists, will please to communicate their views in regard thereto. If any correspondents have raised seed of very superior Vegetables, &c., they will please to communicate the fact. Any packages intended for us must be left with *A. D. Maintain*, corner of South and Beekman streets, New-York, but letters should always be transmitted per mail.

REMARKS.—All orders for Fruit and Ornamental Trees, Green-house Plants, Bulbous Flowers, Dahlias, or Seeds, must be sent *direct to us, or through a regularly authorized agent, and not through the agency of any person who vends similar articles*. Every invoice transmitted by us will have a *printed heading, and our signature, to prove it genuine, and we assume no guarantee whatever, where such an invoice cannot be produced*. We mention these cautions for good and conclusive reasons, and we most particularly enjoin their strict observance on purchasers. When orders are sent, directions should be very precisely given how the packages are to be marked, and by what route or conveyance they are to be forwarded, &c. Orders from a distance will always receive the utmost attention, both as to packing and forwarding, and it is only requisite for persons sending orders to specify the extent of land and water car-

riage, and the articles will be packed accordingly. The packages will be forwarded by such route as shall be designated, and where the option is left to us we will adopt such mode of transmission as shall be most economical and safe. During winter, when the northern rivers and canals are frozen, all packages destined for the Western states, can be sent by the way of New Orleans, or via Philadelphia or Baltimore, to Pittsburgh or Wheeling.

All Proprietors of Nurseries and venders of seeds, &c., are invited to visit and inspect our Establishment.
